and Oximeter**

PulseSense™ VET
**WIDESCREEN™ Digital
Veterinary Pulse Oximeter**

Nonin offers its innovative pulse oximetry technology to veterinary professionals at economical prices. Nonin's veterinary pulse oximeters incorporate veterinary-specific software and hardware with a much wider heart rate range and greater sensitivity than other veterinary pulse oximeters.

Nonin's line of veterinary capnography provides added assurance without the complexity. The multiparameter monitors measure and display EtCO₂ and FiCO₂ values as well as the respiration rate of intubated animals. The widescreen displays also serve as a user-friendly touch panel where all settings and adjustments are made.
