

Two **Gases for Life** are hiding in this picture. And three with a burning passion for gases.

Diana Buss, Messer Group GmbH, Vice President Communications.

Stefan Messer, Messer Group GmbH, CEO and owner.

Davor Spoljaric, Messer Austria GmbH, Senior Manager Application Technology Metallurgy.

Messer produces and supplies industrial gases for all areas of everyday life. For example, energy-saving, low-emission and cost-effective glass production is neither conceivable nor feasible without **Gases for Life**. Natural gas and oxygen (**O₂**) are used in order to achieve the required combustion temperature when melting glass. This is also the case in the production of copper and ceramics. The manufacture of tiles therefore relies on oxygen. But as well as ensuring that glasses and brewing vats are of the highest quality, **Gases for Life** are used to the same effect when it comes to their contents. Through carbon dioxide (**CO₂**) in beer and mineral water, for example. Further information can be easily found at www.messergroup.com or www.gasesforlife.de.
