

# Four **Gases for Life** are hiding in this picture. And a green finger.

Dr. Monica Hermans, Messer Group GmbH, Manager Application Technology Chemistry/Environment.  
Stefan Terkatz, Messer Industriegase GmbH, Manager Technical Service.

Messer produces and supplies industrial gases for all areas of everyday life. **Gases for Life** may be invisible, but they have no reason to hide. For example, old refrigerators are recycled in a safe and environmentally friendly way with the aid of nitrogen (**N<sub>2</sub>**). Cryogenic liquid nitrogen is used for PVC recycling of garden hoses. In the treatment of wastewater, for example, carbon dioxide (**CO<sub>2</sub>**) replaces mineral acids. Drinking water can be treated with oxygen (**O<sub>2</sub>**), ozone (**O<sub>3</sub>**) and carbon dioxide. Paper can be bleached without using any chemicals whatsoever, except for ozone. In short: **Gases for Life** are natural products that render many chemical products superfluous and are kind to the environment.
